LÍNEA ECO Y RECYCLED

Todos los materiales ECO deben cumplir requerimientos como: ser libres en plomo, metales pesados, cadmio, alquilofofenoles, ftalatos y formaldehídos. Además de cumplir especificaciones mínimas en pruebas físicas de adhesión, desgarre, ruptura y abrasión taber para sintéticos.

Certificación de contenido reciclado, prácticas sociales, ambientales y restricciones químicas de materiales reciclados para reducir/eliminar el daño causado por su producción. Identificar y compartir las mejores prácticas con respecto a la agricultura, materiales, procesamiento, la trazabilidad y el producto, reduciendo el impacto de la industria textil en el mundo: el suelo, el aire y la población humana.

New:
 Nuevos materiales de línea para la temporada.

ACOPOL[®]
Pasión por Innovar.

RW 25

Tiene una sensación de misterio y escapismo, con cualidades surrealistas que se alinean con los temas de la segunda era espacial. Ofrece una nueva versión del futurismo.

Es un tono apenas visible que le confiere un atractivo de conexión a tierra y equilibrio. Este tono polvoriento ya forma parte de los mundos virtuales y en IA siendo un color comercial. Al ser un color versátil abarca distintos géneros, grupos demográficos y estaciones.

Celebra los aspectos extraños y maravillosos de la naturaleza, pero también adquiere una estética sintética que conecta con los temas digitales. Uniendo la fantasía con la realidad. Este color transmite bienestar y se alinea al concepto biosintético.

El coral es un color energizante y agradable que emite alegría. Este tono fomenta un reinicio para priorizar los placeres de la vida. Mediante el cual los momentos de placer se fusionan con un sentido de propósito.

Esta inspirado en prácticas regenerativas que protegen la biodiversidad. Tiene una cualidad inherente optimista y saludable con un enfoque a la sostenibilidad vinculado con cada parte de la naturaleza desde la tierra hasta el espacio.
